Professional Summary

Senior Java Software Engineer with over ten years of experience designing, building, and evolving enterprise web applications across finance, retail, and government sectors. Deep expertise across the Java ecosystem — Java EE, EJB, JSF, Spring, Hibernate, JPA, and PL/SQL — combined with solid engineering practices such as TDD, BDD (Cucumber), REST/SOAP APIs, and automated delivery pipelines (Maven, Jenkins, Git). Proven ability to lead architecture decisions, introduce testing and code review cultures, and mentor development teams — including mission-critical systems for the Brazilian Federal Police and financial platforms. Collaborative, pragmatic, and committed to clean code and continuous improvement.

Core Competencies

- Enterprise Java Development (Java EE, EJB, JSF, Servlet)
- Spring Framework, Spring Boot & Dependency Injection
- Object-Relational Mapping (Hibernate, JPA)
- RESTful Web Services & API Design
- SOAP Web Services & SOA Integration
- Database Design & PL/SQL Programming
- Test-Driven Development (TDD) & BDD (Cucumber)
- Software Architecture & System Design
- Build Automation & Dependency Management (Maven, Gradle)
- CI/CD & Release Automation (Jenkins)
- Version Control & Collaboration (Git, GitLab)
- Code Review, Quality Gates & Engineering Culture
- Team Leadership & Developer Mentorship
- Mission-Critical & High-Availability Systems
- Deep Learning & Applied AI (Udacity Nanodegree)

Professional Experience

Trustly – Senior Java Software Engineer

Mar 2022 – Set 2026 | Remote

- Design and engineer high-throughput, scalable back-end services in Java for a global real-time payment platform
- Develop RESTful APIs and integrate financial services with robust error handling, monitoring, and security in mind
- Contribute to architecture decisions, code quality, and agile delivery in a fast-moving fintech environment

Grupo GFT – Senior Java Software Engineer

Apr 2021 – Feb 2022 | Brasília, Brazil

- Delivered enterprise back-end solutions in Java for banking and finance clients
- Implemented Spring-based services using TDD, following strict banking-grade quality and security standards
- Automated build and deployment pipelines, reducing manual effort and improving release consistency

Qintess – Software Architect

Jun 2020 – Apr 2021 | Brasília, Brazil

- Defined the technical architecture and design guidelines for critical enterprise web applications
- Selected technologies and set coding standards, improving maintainability across delivery teams
- Bridged business requirements and technical implementation, ensuring scalable and robust solutions

Mirante Tecnologia – Senior Java Developer

May 2019 – Jun 2020 | Brasília, Brazil

- Built back-end components and RESTful services in Java for enterprise applications
- Applied Java best practices, unit testing, and peer review to raise code quality and reduce defects
- Collaborated closely with front-end and QA teams to deliver cohesive, well-integrated features

Cast Group – Senior Java Software Engineer

Oct 2018 – May 2019 | Brasília, Brazil

- Designed and developed web applications using Spring, BDD (Cucumber), REST, and SOAP Web Services
- Championed behavior-driven development, translating business requirements into executable specifications
- Delivered clean, testable code within cross-functional, agile squads

Stefanini – Software Architect / Senior Java Engineer

May 2016 – Sep 2018 | Brasília, Brazil

Software Architect *(Apr 2017 – Sep 2018)* — Brazilian Federal Police

- Architected and coded high-level, mission-critical web applications in Java, EJB, JSF, SOAP, REST, and Hibernate
- Introduced automated testing and code review culture, raising engineering standards across the team
- Configured project builds and deployments on the Jenkins automation server, enabling continuous delivery
- Managed GitLab projects and permissions, streamlining source control and release workflows
- Mentored developers to sharpen their coding skills, code design, and engineering practices

Senior Java Engineer *(May 2016 – Apr 2017)*

- Developed and maintained enterprise-grade Java applications for public-sector clients
- Strengthened system stability and performance through disciplined testing and refactoring

CEPROMAT – Senior Software Engineer

Jul 2013 – Mar 2016 | Cuiabá, Brazil

- Engineered back-end software solutions in Java for public-sector operations
- Designed data models and business logic supporting critical institutional workflows

UNITEC – Sefaz/PI – Java Software Developer

Aug 2011 – Jul 2013 | Teresina, Brazil

- Developed and maintained tax and fiscal systems for the Piauí State Finance Department (SEFAZ/PI)
- Implemented Java services and PL/SQL routines to process and validate fiscal data reliably

Remanso Mineradora e Construtora – Java Software Developer

Feb 2008 – Jul 2011 | Teresina, Brazil

- Built web applications and internal systems in Java supporting construction and mining operations
- Delivered end-to-end solutions, from data modeling and business rules to UI and deployment

Education

Nanodegree, Deep Learning
Udacity Brasil (2017–2018)

MBA in IT Governance
UNIEURO – Universidade Euroamericana (2011–2012)

Computer and Information Sciences, General
FATEPI – Faculdade de Tecnologia do Piauí (2005–2010)

Skills & Technologies

Languages & Databases: Java, PL/SQL, SQL, Hibernate, JPA
Frameworks: Java EE, EJB, JSF, Servlet, Spring, Spring Boot, Dependency Injection
APIs & Integration: REST, SOAP, SOA, Web Services
Testing: JUnit, TDD, BDD (Cucumber)
Build & CI/CD: Maven, Gradle, Jenkins
Tools & Collaboration: Git, GitLab, Agile (Scrum/Kanban)
Architecture & Engineering: Software Architecture & System Design, Code Review & Quality Gates, Mission-Critical & High-Availability Systems, Team Leadership & Mentorship
Data & AI: Deep Learning, Neural Networks (Udacity Nanodegree)

Languages

- Portuguese: Native
- English: Professional
